EXECUTIVE SUMMARY

STORMWATER UTILITY FORMATION

This Stormwater Utility Formation Report is a comprehensive planning document that provides analysis and recommendations through full build out within the Urban Growth Boundary (UGB). The Stormwater Utility Formation Report provides recommendations for current and future needs of the stormwater conveyance system in Independence within the UGB. This report was prepared by PacWest Engineering, PC under contract with the City of Independence.

Technical Memorandum One discusses the operations of a stormwater utility, including the existing stormwater maintenance program and recommendations for future improvements. It is recommended that the City of Independence establish a regular maintenance program for its storm drainage facilities, including: annual cleaning of all catch basins; cleaning of ditches used for stormwater conveyance every three years; and tv'ing of storm drainage lines every ten years. Additional staff is recommended as a result of the increased workload associated with a regular maintenance program.

Technical Memorandum Two presents an analysis of the City's financial record-keeping software and the ability of this software to serve the formation of a stormwater utility. It is recommended that the City utilize their existing software program, and customize the chart of accounts to accommodate the stormwater utility.

Technical Memorandum Three provides a detailed analysis of customer classes and billing rates associated with the formation of a stormwater utility. Recommended rates have been established for three classifications of customers – Light Intensity Residential, High Intensity Residential, and Commercial / Industrial. The recommended initial rate is \$5 per ERU and should be increased on an annual basis.

Technical Memorandum Three also provides an analysis of System Development Charges (SDC's) for the City's storm drainage system. It is recommended that the City establish an SDC rate of \$390.44 per ERU.

Technical Memorandum Four presents a public education brochure that is recommended for use to inform citizens of the new stormwater utility fee.

Technical Memorandum Five covers the policies and procedures associated with the implementation of the stormwater utility. Included in this technical memorandum are policies and procedures that are recommended for adoption by the City. These policies include: a delinquent payment policy; well and septic tank users policy; on-site detention credit policy; low-income users policy; public users policy; appeal policy; and asset management policy.

Technical Memorandum Six provides a draft ordinance that is recommended for use by Council in adopting the formation of a stormwater utility.

Appendices are presented that provide detailed information and samples regarding stormwater utility billings and methodologies, SDC Calculations, a public education brochure, and a draft version of the implementing ordinance.

TECHNICAL MEMORANDUM 1.0 OPERATIONAL ANALYSIS & RECOMMENDATION

1.1 SCOPE

PacWest Engineering has met with Mike Danko, Community Development Director and Ken Perkins, Maintenance Superintendent and has discussed the existing maintenance program for the City's existing stormwater facilities. Specifically, PacWest Engineering has addressed the following items that were included in the scope of services to be provided to the City of Independence. The results of these items are documented within this technical memorandum.

- Meet with Staff and conduct interviews regarding the existing maintenance program. The interviews will cover the existing maintenance program, known maintenance deficiencies, staffing issues, and management structure.
- Review information from similarly sized communities on known approaches to the maintenance program content, staffing, and management issues.

1.2 MAINTENANCE PROGRAM

The City of Independence currently does not have an established stormwater maintenance program in place. The cleaning of catch basins and/or ditches is occurring largely in response to emergency calls.

It is the responsibility of the Public Works Department to ensure that the stormwater system is being adequately maintained in order to serve the needs of the public. PacWest Engineering recommends the following activities be established as part of an organized maintenance program.

All catch basins within the public right-of-way should be cleaned on an annual basis. It is recommended that this occur in the early fall, prior to heavy winter rains and flooding. Cleaning of the catch basins can be completed in an efficient manner through the use of a Vactor-truck. There are two methods that the City may wish to consider in regards to acquiring vactor-truck services. One alternative is that the City may contract the work out to a firm providing such services. Another alternative would be to enter into an interagency agreement with Polk County or another local jurisdiction to share the expense of the equipment.

All ditches within the public right-of-way that are used for stormwater conveyance should be cleaned every three years. It is recommended that one third of the inventory be cleaned each year so as to provide a consistent workload for the maintenance staff. Cleaning of the ditches will involve regrading of the ditches and clearing of any excess vegetation and debris.

All stormwater pipes within the public right-of-way should be visually inspected via the use of a television camera once every ten years. Televising the lines will allow the City of Independence to maintain records regarding the status and condition of the lines. This will allow for early identification of any condition problems that may need to be addressed. The City may contract this work out to a firm providing stormwater line television services. It is recommended that one tenth of the lines be visually inspected each year.

PacWest Engineering recommends that one additional staff member be hired by the City as a result of the additional workload that will be created by the implementation of the recommended maintenance activities. Depending on financial considerations, it is our understanding that the City may desire to postpone the hiring of additional staff for the time being. However, with the implementation of the new stormwater utility and an established maintenance program, the need for additional staff will be quickly realized.

1.3 COMPARABLE COMMUNITIES

The Independence Public Works Department is currently organized with management oversight from the Community Development Director and operational oversight from the Public Works Superintendent. Field staff is loosely responsible for the different components of the Public Works program including storm drainage, sanitary sewer, water system, transportation, and parks and recreation. Current staff includes individuals possessing a wealth of first hand knowledge concerning the existing stormwater conveyance system.

The current organization varies from a more traditional structure with a separate Public Works Department and Community Development Department, both with separate directors of the respective departments. The City of Independence structure works well for the City due to the unique talents and abilities of the current staff. The current model has been cost effective while meeting the requirements of a Public Works function. It is recommended that the current organizational structure remain in place for as long as key personnel are in place.

TECHNICAL MEMORANDUM 2.0

FINANCIAL ANALYSIS & IMPLEMENTATION REQUIREMENTS

2.1 SCOPE

PacWest Engineering has met with City staff members and discussed the financial record keeping requirements associated with the formation of a storm water utility. Specifically, PacWest Engineering has addressed the following items that were included in the scope of services to be provided to the City of Independence. The results of these items are documented within this technical memorandum.

- Meet with City financial staff to review existing financial record keeping and discuss existing accounting and utility billing software.
- Prepare a chart of accounts for record keeping consistent with those in use in other cities with stormwater utilities, as may be tailored to fit the City of Independence.
- Document other accounting and billing software in use by other public agencies of similar size and complexity, if needed.

2.2 FINANCIAL SOFTWARE ANALYSIS

Staff members from the City of Independence have expressed the desire to utilize the accounting and utility billing software currently in use by the City. PacWest Engineering has discussed the software requirements with City staff and understands that the existing software program has the capability to expand to handle the stormwater utility.

2.3 CHART OF ACCOUNTS

Staff members from the City of Independence have expressed the desire to adapt the chart of accounts currently in use by the City for its sanitary sewer utility. PacWest Engineering has reviewed the existing chart of accounts for the sanitary sewer utility with Staff, and with minor modifications it appears to be sufficient to provide the record keeping needs associated with a stormwater utility.

2.4 RECOMMENDATIONS

PacWest Engineering has met with staff from the City of Independence and discussed the various requirements for financial tracking of a stormwater utility. The City has expressed the desire to continue to utilize their existing accounting and utility billing software, as well as their existing financial chart of accounts. PacWest Engineering recommends that the City continue to use their existing systems. By utilizing the existing systems, there is no need to train employees on a new

software program. Additionally, by adapting the existing chart of accounts, there is consistency on how finances are tracked across the entire Public Works program.

TECHNICAL MEMORANDUM 3.0
RATE & SDC DEVELOPMENT, ANALYSIS, & RECOMMENDATION

3.1 SCOPE

PacWest Engineering has analyzed the formation of a stormwater utility for the City of Independence and has developed recommendations for billing classes and rates. We have also reviewed and updated the recommended SDC rates. Specifically, PacWest Engineering has addressed the following items that were included in the scope of services to be provided to the City of Independence. The results of these items are documented within this technical memorandum.

- Develop customer classes and their billing relationships, develop billing list by class. This will be made up of a residential single family equivalency which will be applied to other classes based on impervious areas.
- From the City's aerial mapping, verified where necessary by field measurements, calculate the billing equivalency for each non single family customer. Duplexes and triplexes are excepted from the above and are expected to have a standard relationship with single family users.
- Develop rate alternatives covering administration, operations, maintenance, equipment, and capital project costs.
- Based on the Stormwater Master Plan, develop SDC assessment methodology.

3.2 BILLING LIST BY CLASS

The billing rate per class has been developed using a Single Family Residential Unit as the base unit. The stormwater utility rate for each property class shall be determined based on the number of Equivalent Residential Units (ERU's), as follows:

Type	No. of ERU's
Light Intensity Residential	1 ERU per unit
High Intensity Residential	1 ERU per 3,250 SF of impervious surface
Commercial & Industrial Units	1 ERU per 3,250 SF of impervious surface

Light Intensity Residential is defined as properties that are equivalent to one ERU per unit and are classified as a single family unit, duplex, or triplex. High Intensity Residential properties have an ERU based on measured impervious surface area and are designated as multi-family housing with four or more units.

High Intensity Residential, Commercial, and Industrial properties shall be considered to be furnished service in proportion to the amount of the property's impervious surface, and that for each 3,250 square feet of impervious surface area, the property is furnished service equivalent to

that furnished a single family unit. Each developed property shall be charged a minimum utility service charge equivalent to one ERU. The number of ERU's for any given property shall be rounded to the nearest whole number of ERU's.

3.3 CUSTOMER BILLING EQUIVALENCIES

A customer billing list for all utility customers has been included in Appendix A. It is recommended that the City maintain a database with the billing equivalency rates, including those modified by the appeal process.

3.4 RATE ALTERNATIVES

An issue paper was prepared by PacWest Engineering in August of 2004 to discuss many of the issues associated with various rate alternatives. Examples of issues discussed were whether or not public agencies should be exempt from the stormwater utility charges and whether financial relief shall be provided to low-income customers. These issues were presented to the Stormwater Advisory Committee and the committee endorsed all of the recommendations.

A copy of the August 2004 Stormwater Utility Issue paper has been included in Appendix C.

3.5 STORMWATER UTILITY RATES

PacWest Engineering recommends the formation of a stormwater utility with an initial rate of \$5. This is broken down into a \$1 base stormwater utility rate to cover the billing and administration expenses for the City. Additionally, this charge includes a rate of \$4 per ERU that covers maintenance, emerging problems to the existing system, and capital improvements to fix existing deficiencies.

This rate is lower than is needed in order to correct all the existing deficiencies in the next twenty years. Therefore, it is recommended that this rate be increased on January 1st of each year.

In order to fully fund the current deficiencies to the existing storm drainage system, PacWest Engineering recommends that the base administrative utility rate be increased at a rate of 3% per year in order to match the projected inflation rate. Thus, this portion of the total stormwater utility rate will increase from \$1 in year 2005 to \$1.75 in year 2024. Furthermore, PacWest Engineering recommends that the variable portion of the rate that covers maintenance, emerging problems, and capital improvements should be increased at a rate of 8% per year. This allows for all capital projects to be completed within a twenty year period. Thus, this portion of the total stormwater utility rate will increase from \$4 per ERU in year 2005 to \$17.26 per ERU in year 2024. Should the time frame for fixing existing deficiencies be extended, the rate increases could be lowered. The rates should be reviewed annually based on actual experience.

8% Annual Rate Increase			
	Base Rate – Covers Billing & Administration	Variable Rate – Covers Maintenance, Emerging Problems, & Capital Improvements	Total Stormwater Utility Rate per ERU
2005	\$1.00	\$4.00	\$5.00
2024	\$1.75	\$17.26	\$19.01

PacWest Engineering recommends that the City of Independence aggressively pursue grant funding opportunities in order to assist with the completion of the identified capital improvement program. If the City of Independence is successful at obtaining grants towards the stormwater program, then the stormwater utility rates could be adjusted.

The following rates assume that 25% of the capital improvements are funded through grants. With a program partially funded by grants, an annual rate increase of 6% would sufficiently fund the stormwater program over a twenty year period.

25% of Capital Improvements funded by Grants			
6% Annual Rate Increase			
	Base Rate – Covers Billing & Administration	Variable Rate – Covers Maintenance, Emerging Problems, & Capital Improvements	Total Stormwater Utility Rate per ERU
2005	\$1.00	\$4.00	\$5.00
2024	\$1.75	\$12.10	\$13.85

Detailed spreadsheets showing the calculations for the stormwater utility rates have been included in Appendix C.

By adopting the recommended initial stormwater utility rate of \$5.00 per ERU, the following are the average rates that will be charged to the various billing classifications.

- Light Intensity Residential
 - \$5.00 single family
 - \$10.00 duplex (\$9.00 if billed to 1 customer)
 - \$15.00 triplex (\$13.00 if billed to 1 customer)
- High Intensity Residential
 - \$21.00
 - *based on average impervious area of 16,555 SF
- Commercial / Industrial
 - \$93.00
 - *based on average impervious area of 91,266 SF

3.6 COMPARABLE COMMUNITIES

Many cities throughout the State of Oregon have adopted stormwater utilities. The rates vary greatly by jurisdiction. Some communities have established a lower rate in order to supplement other existing budget sources, while other communities have established higher rates in order to

fully fund their entire stormwater program through the collection of utility fees. The latter method is the direction that most communities are pursuing.

The following is a list of monthly Stormwater Utility Rates for comparable communities throughout the State. This list serves to show that an initial rate of \$5.00 per ERU for the City of Independence is reasonable and just.

Comparable Stormwater Utility Rates per Month		
Jurisdiction	Residential Rate	Commercial / Industrial Rate
City of Wilsonville	\$3.72	\$3.72 per ESU (1 ESU = 2,750 SF)
City of Hillsboro	\$4.00	\$4.00 per ESU (1 ESU = 2,640 SF)
City of Corvallis	\$4.98	\$4.98 per ESU (1 ESU = 2,750 SF)
City of Gresham	\$7.22	\$7.22 per ERU (1 ERU = 2,500 SF)
City of Portland	\$13.30	\$6.06 per ERU (1 ERU = 1,000 SF)

3.7 SDC ASSESSMENT METHODOLOGY

A System Development Charge (SDC) is a single fee for each utility required as each piece of property is developed and requires services. This fee goes directly into a capital construction fund and is used to pay for system improvements that are a result of increased development requiring additional system capacity.

The following table is a summary of the recommended SDC amounts for different types of development within the City of Independence.

Development	Storm Drainage SDC Rate
Light Intensity Residential	\$390.44 per unit
High Intensity Residential	\$390.44 per ERU
Commercial / Industrial	\$390.44 per ERU
Public	\$390.44 per ERU

These recommended SDC Rates were developed using the following methodology.

1. **Determine SDC Eligible Project List.** Detailed project listings are included in the Stormwater Master Plan prepared by PacWest Engineering. Table 7.1.2 of the Stormwater Master Plan highlights the total costs associated with the growth related component of the improvement projects.
2. **Translate design population into single and multi-family housing units based on projected development mix.**
3. **Divide SDC eligible project cost by total growth of ERU's to calculate a SDC rater per ERU.** Calculations for the development of the SDC rates have been included in Appendix D.

<p style="text-align: center;">TECHNICAL MEMORANDUM 4.0 PUBLIC INFORMATION / EDUCATION</p>
--

4.1 SCOPE

PacWest Engineering has researched available public education materials which will serve to educate the citizens of the City of Independence on the topic of a stormwater utility. Specifically, PacWest Engineering has addressed the following items that were included in the scope of services to be provided to the City of Independence. The results are documented within this technical memorandum.

- Review available public domain public information/education documents which would be applicable and useful for the City of Independence. This will include determining requirements to acquire copies for use by the City.

4.2 PUBLIC EDUCATION BROCHURE

PacWest Engineering has reviewed public education materials from a variety of sources, including the City of Eugene and the City of Portland. The level of information included in these materials varies greatly.

PacWest Engineering feels that the citizens and business owners within the City of Independence deserve to be informed on the specifics of the stormwater utility program to be implemented within their City, as well as background information on stormwater utilities in general. Therefore, PacWest Engineering has drafted a brochure that is specific to the City of Independence.

A copy of the brochure has been included in Appendix E.

4.3 RECOMMENDATION

PacWest Engineering recommends that the City of Independence utilize this public education brochure or a similar document to inform the community on the new stormwater utility. We recommend that this brochure be mailed to citizens with their utility bill following adoption and formation of the stormwater utility. Additionally, copies of this brochure should be made available at the Public Works Department.

TECHNICAL MEMORANDUM 5.0 IMPLEMENTATION POLICIES AND PROCEDURES

5.1 SCOPE

PacWest Engineering has prepared policies and procedures to assist the City of Independence in the implementation of a new stormwater utility. Specifically, PacWest Engineering has addressed the following items that were included in the scope of services to be provided to the City of Independence. The results are documented within this technical memorandum.

- Identify and document the steps needed to implement the stormwater utility including financial startup costs.
- Develop recommended policies and procedures for the administration of the stormwater financing and capital recovery fee programs.
- Develop policies regarding delinquent payments including those from well and septic tank users.
- Make recommendations on asset management including categories of assets and asset lives.

5.2 STORMWATER UTILITY IMPLEMENTATION

This Stormwater Utility Formation report provides detailed information on how to establish and implement a stormwater utility for the City of Independence. The following are the basic administrative steps that should be taken in order to adopt the recommended utility. PacWest Engineering will be available to provide assistance to the City of Independence throughout the implementation process.

1. This report should be reviewed and recommended for council approval by City staff.
2. The implementing ordinance should be approved by the City Council. It is recommended that this occur after a public hearing that is advertised to the community.
3. The Stormwater Utility rates should be adopted by resolution.
4. Software acquisition or expansion. Set up chart of accounts for revenues and expenditures. Train employees on expenditure tracking.
5. Verify and update customer billing list.
6. The stormwater utility rate should be charged to customers. The public education brochure that was prepared in conjunction with this report should be included as a notice to customers with their utility billing.

5.3 DELINQUENT PAYMENT POLICY

PacWest Engineering recommends that the City of Independence adopt by resolution the following delinquent payment policy. It is recommended that any fee due which is not paid when due may be recovered in an action at law by the City. In addition to any other remedies or penalties provided by City ordinance, failure of any customer to pay fees promptly when due shall be collectable pursuant to collection efforts or other lawful remedies of the City. The City may subject the customer to discontinuance of any utility services provided by the City and the City Manager is empowered and directed to enforce this provision against such delinquent customers.

5.4 WELL & SEPTIC TANK USERS POLICY

PacWest Engineering recommends that the City of Independence adopt by resolution the following policy for well and septic tank users. Developed properties that are served by well and/or septic tanks shall still be required to participate in the stormwater utility. If these properties are not served by other city utilities, than billing for storm drainage service shall occur upon creation of an impervious surface from which storm water may be discharged into public drainage facilities.

If a well or septic tank user is delinquent on payments in an amount equal or greater than \$250 for their storm drainage utility balance, the City may pursue collection efforts and place a lien on the property.

5.5 ON-SITE DETENTION CREDIT POLICY

PacWest Engineering recommends that no credit be granted to property owners who have installed detention facilities as part of their on-site development. In most cases, the detention facilities are designed and built only to mitigate impacts of the individual development and still require city facilities to transport the storm water to its final destination. Often these facilities are not well maintained and can create additional impacts as they age.

5.6 PUBLIC USERS POLICY

PacWest Engineering recommends that no exemption be granted to public agencies. The City of Independence and the Central School District are likely to be the public agencies most affected by the implementation of a stormwater utility. Some might argue that to charge public agencies simply creates unnecessary administrative costs which are ultimately borne by taxpayers. However, PacWest Engineering believes that to exempt public agencies makes them insensitive to the very real budget impacts created by such fees faced by those in the private sector. Providing a subsidy to public agencies will cause an increase in the amount required of each customer and may seem unfair.

5.7 LOW-INCOME USERS POLICY

The storm water utility is property owner based and therefore is not directly charged to the majority of the low income residents. This indirect effect makes it difficult to design an equitable rate relief system. PacWest Engineering recommends that the issue of rate relief be deferred and considered separately in conjunction with other city utilities in order to develop a comprehensive and consistent approach.

5.8 APPEAL POLICY

PacWest Engineering recommends that the City of Independence adopt by resolution the following appeal policy. Upon application and submittal of a \$250 application fee, a customer may seek a reduction of the monthly charge for storm drainage service. Upon submission of appropriate evidence, the Community Development Director or their designee shall consider the application. The customer must show to the city's satisfaction the amount of permanent reduction to the amount of impervious surface for the property.

Charges will be adjusted (increased or decreased) for the property if the change to the measured impervious area results in a change to the calculated number of ERU's for the subject property. If the number of ERU's remains the same or increases, the \$250 application fee will be retained by the City as an administrative fee for reviewing the application. If the number of ERU's decreases, the \$250 application fee will be refunded to the customer as a \$250 credit to their utility account.

Any adjustment made shall continue until the property is further developed. Upon further development of the property another application may be made by the customer.

5.9 ASSET MANAGEMENT POLICY

It is important to establish an asset management program in order to preserve and maintain the stormwater utility in an appropriate fashion. PacWest Engineering has prepared a Storm Water Master Plan that serves to document all of the City's storm drainage facilities and assets.

PacWest Engineering recommends that the City of Independence adopt an asset management program that is similar to those adopted for the City's other utilities. Typically, the Sanitary Sewer Asset Management program is most applicable to a stormwater asset management program. PacWest Engineering will be available to assist as needed.

**TECHNICAL MEMORANDUM 6.0
IMPLEMENTING ORDINANCE DEVELOPMENT AND APPROVAL
PROCESS**

6.1 SCOPE

PacWest Engineering has researched and drafted ordinance language for use by the City Council in adoption of the recommended stormwater utility. Specifically, PacWest Engineering has addressed the following items that were included in the scope of services to be provided to the City of Independence. The results are documented within this technical memorandum.

- Research available stormwater model ordinances and existing adopted examples including credit policies. Also research available sample ordinances covering regulatory or policy issues associated with the operation of a stormwater utility.
- Analyze available information and draft preliminary ordinances consistent with the needs of the City of Independence including provisions for appeals and credits as appropriate.

6.2 IMPLEMENTING ORDINANCE

PacWest Engineering has drafted ordinance language for approval by the City Council and the Mayor. A formal resolution should be adopted which would establish the formation of a stormwater utility.

The draft ordinance language has been included in Appendix F.

Independence Stormwater Utility Equivalent Residential Units

The proposed Stormwater Utility formation for the City of Independence is based on Equivalent Residential Units (ERU's). The methodology for assigning ERU's is covered in the preceding pages of this handout. This summary sheet specifically states the dollar amount each stormwater utility user will be charged per ERU, the total number of ERU's in Independence, the total number of stormwater utility users in Independence, and an analysis of the top 10 stormwater utility users in Independence.

Base Stormwater Utility Rate: \$1
 Rate per ERU: \$4
 Total Stormwater Users: 1988
 Total ERU's: 3248

Proposed Annual City Revenue: \$ 179,760

Top 10 Stormwater Utility Customers

Customer	Impervious Area (ft ²)	ERU's	Monthly Rate (\$)

STORM WATER UTILITY ISSUE PAPER FOR THE CITY OF INDEPENDENCE

1. What should Independence use for calculating Equivalent Residential Users (ERUs) for larger users?

The billing for the proposed storm water utility is planned to be based on an Equivalent Residential Unit (ERU). The typical range of impervious area for a single family residential unit is 2500-3500 square feet. The policy implications are that the higher the number used for calculating ERU's, the lower the cost to larger users such as large commercial, industrial and public uses.

Recommendation: PacWest recommends using 3250sf for the following reasons: 1) larger users often are more involved in assisting the City in storm water maintenance through their own maintenance activities; and 2) softening the impact is a reasonable strategy to maintain and recruit job producing activities which have an overall community benefit.

2. Should the bill have a base amount to cover billing and administrative costs such as \$1.00/month?

This concept recognizes that some of the costs of running a utility are associated with the account. Larger users do not typically create more billing or administrative costs than other users. For the same revenue requirements this policy would produce a marginal ERU rate break for larger users.

Recommendation: PacWest recommends that a base amount be incorporated into the final rate schedule.

3. Should Public Agencies be exempt from storm water utility charges?

The most affected public agencies are likely to be the City of Independence and Central School District. Some might argue that to charge public agencies simply creates unnecessary administrative costs ultimately born by the taxpayers. Others may argue that to exempt public agencies makes them insensitive to the very real budget impacts created by such fees faced by those in the private sector.

Recommendation: PacWest recommends that no exemption be granted in that the taxpayer base for each of the agencies will not in every case be limited to the same taxpayers in the City of Independence. Such a subsidy will cause an increase in the amount required of each customer and may seem unfair.

4. **Should credits be granted to property owners who have installed detention facilities as part of their on site development?**

The question is the degree of additional expense by an individual property owner which benefits the public at large. In most cases, the detention facilities are only to mitigate impacts of the individual development and still require city facilities to transport the storm water to its final destination. Often these facilities are not well maintained and can create additional impacts as they age.

Recommendation: PacWest recommends that no credit be granted as the facilities are largely for the individual property benefit. To ensure maintenance a policy of accepting these facilities for public maintenance when proper easements are furnished should be considered.

5. **Should low income rates be established to provide relief to qualifying customers?**

The storm water utility is property owner based and therefore is not directly charged to the majority of the low income residents. This indirect effect makes it difficult to design an equitable rate relief system.

Recommendation: PacWest recommends that the issue of rate relief be deferred and considered separately in conjunction with other city utilities in order to develop a comprehensive and consistent approach.

What is a Stormwater Utility?

The City provides a valuable public service by providing storm drainage facilities for the collection and disposal of stormwater discharged from properties and public right-of-ways within the City. The storm drainage facilities constitute a public utility owned and operated by the City. The stormwater utility exists for the benefit of any person within the city who wants to have the public storm drainage facilities available for the diversion, collection, and/or disposal of storm drainage and other runoff water from their property and represents a municipal service in a developed urban environment which is essential to the public health, safety, and welfare.

The revenues collected help to fund the cost of the management, maintenance, extension and construction of the public storm drainage facility as a public utility in the City.

Outlet Pipes at Ash & Williams Street

The Stormwater Utility was adopted by Resolution 2005-XXX on Date ##, 2005.

City of Independence Stormwater Utility

Frequently Asked Questions

How is the stormwater utility rate calculated?

The stormwater utility rate is made up of two components. The first component is the monthly administration fee which is a flat rate charged to all customers. The second component is the monthly charge per ERU.

Outfall to Willamette River

The billing rate has been developed using a Single Family Home as the base unit. The stormwater utility rate for each property is determined based on the number of Equivalent Residential Units (ERU's). Each developed property shall be charged a minimum utility service charge equivalent to 1 ERU.

Light Intensity Residential (Single Family homes, Duplexes, & Triplexes) are charged at a rate of 1 ERU per unit.

High Intensity Residential (Four or more units) & **Commercial/Industrial** are charged at the rate of 1 ERU per 3,250 square feet of impervious area.

Doesn't the City have enough money? Why are they charging me more fees?

A stormwater utility is charged to those customers who are benefiting from the City's storm drainage system. It is a legal and fair method to share the financial burden of maintaining and improving the system. Without the stormwater utility, the City would not be in a financial position to maintain and repair existing deficiencies to the storm drainage system. Public agencies are not exempt from the utility fee and are also required to pay their fair share.

I am a low-income resident. Can I pay a reduced fee?

No. At this time, the City has not adopted a rate relief policy for low-income residents.

My property has a well and a septic tank. Do I still have to pay a stormwater utility fee?

Yes. Developed properties that are served by well and/or septic tanks are required to participate in the stormwater utility. If these properties are not served by other city utilities, than billing for storm drainage service will occur upon creation of an impervious surface from which storm water may be discharged into public drainage facilities.

Stryker Road Drainage Ditch

Am I going to be receiving another bill in the mail each month?

No. The City will combine the billing for the stormwater utility with the other utility charges for sanitary sewer service and water service.

I don't agree with the rate that the City is charging me. Is there an appeal process?

Yes. Upon application and submittal of a \$250 application fee, a customer may seek a reduction of the monthly charge for storm drainage service. Upon submission of appropriate evidence, the Community Development Director or their designee shall consider the application. The customer must show to the city's satisfaction the amount of permanent reduction to the amount of impervious surface for the property.

Charges will be adjusted (increased or decreased) for the property if the change to the measured impervious area results in a change to the calculated number of ERU's for the subject property. If the number of ERU's remains the same or increases, the \$250 application fee will be retained by the City as an administrative fee for reviewing the application. If the number of ERU's decreases, the \$250 application fee will be refunded to the customer as a credit to their utility account.

ORDINANCE NO. 2005 - _____

AN ORDINANCE ESTABLISHING THE FORMATION OF A STORMWATER UTILITY

WHEREAS, the City provides a valuable public service by providing storm drainage facilities for the collection and disposal of stormwater discharged from properties and public right-of-ways within the City. The storm drainage facilities constitute a public utility owned and operated by the City. The utility exists for the benefit of any person within the city who wants to have the public storm drainage facilities available for the diversion, collection, and/or disposal of storm drainage and other runoff water from the person's property and represents a municipal service in a developed urban environment which is essential to the public health, safety, and welfare.

WHEREAS, persons who use the public storm drainage facilities ought to be charged fees that reflect the cost of the management, maintenance, extension and construction of the public storm drainage facility as a public utility in the City.

WHEREAS, the following charges are for the use and benefit of the storm drainage systems of the City and are to be collected from each customer whose premises fall within the description of premises to be charged as hereinafter set forth.

WHEREAS, the Council finds, determines, and declares the necessity of providing for the City's stormwater systems by formation of a stormwater utility.

NOW, THEREFORE, BE IT ORDAINED BY THE COUNCIL OF THE CITY OF INDEPENDENCE:

Section 1 Definitions

"City". The City of Independence, a municipality, and its authorized employees.

“Customer”. A person in whose name service is rendered as evidenced by the signature on the application/contract for stormwater, sanitary sewer, or water service or, in the absence of a signed instrument, by the receipt and payment of bills regularly issued in his/her/its name.

“Developed”. An area which has been altered by grading or filling of the ground surface, or by construction of any improvement or other impervious surface area, which affects the hydraulic properties of the location.

“Duplex”. A single building which contains two single-family units and shall be calculated as One ERU per unit.

“Equivalent Residential Unit (ERU)”. An area which is estimated to place approximately equal demand on the city’s storm drainage system as a single-family unit. One ERU shall be equal to 3,250 square feet of impervious surface.

“High Intensity Residential”. Residential properties that have an ERU value established based on measured impervious surface area. Properties are designated as multi-family housing and are four or more units.

“Impervious Surface”. Any surface area which either prevents or retards saturation of water into the land surface, or a surface which causes water to run off the land surface in greater quantities or at an increased rate of flow from that present under natural conditions pre-existent to development. Common impervious surfaces include, but are not limited to, rooftops, concrete or asphalt sidewalks, walkways, patio areas, driveways, parking lots or storage areas, graveled, oiled or macadam surfaces or other surfaces which similarly impede the natural saturation or runoff patterns which existed prior to development.

“Light Intensity Residential”. Properties that are equivalent to one ERU per unit and are classified as a single family unit, duplex, or triplex.

“Single Family Unit (SFU)”. That part of a building or structure which contains one or more rooms with a bathroom and kitchen facilities designed for occupancy by one family and where the units are sold and deeded as individual units. A SFU is presumed to have 3,250 square feet of impervious surface area for purposes of this chapter.

“Stormwater”. Water from precipitation, surface or subterranean water from any source, drainage, and non-septic waste water.

“Stormwater System”. Any structure or configuration of ground that is used or by its location becomes a place where stormwater flows or is accumulated, including but not limited to pipes, sewers, curbs, gutters, manholes, catchbasins, ponds, open drainageways, and their appurtenances.

“Triplex”. A single building which contains three single-family units and shall be calculated as One ERU per unit.

Section 2 Establishment and Use of a Stormwater Utility Fee

A stormwater utility fee shall be paid by each customer and shall be established by resolution of the Council for single family units and equivalent residential units. Funds from the stormwater utility shall be used for planning, design, construction, operation, maintenance and administration of storm drainage facilities, including repayment of the indebtedness, and for all expenses for the operation and management of the storm drainage utility.

City Council may, on an annual basis by resolution, change the fees based upon revised estimates of the cost of properly managing, maintaining, extending, and constructing public storm drainage facilities.

Section 3 Calculation of Stormwater Utility Fee

Property not used for single family dwelling purposes shall be considered to be furnished service in proportion to the amount of the property’s impervious surface, and that for each 3,250 square feet of impervious surface, the property is furnished service equivalent to that furnished a

single family unit and that the minimum service charge shall be that established for a single family unit.

The following rates are hereby established for all properties located within the City of Independence. A base stormwater utility rate of \$1.00 shall be established for all customers. An additional rate of \$4.00 per ERU shall be established for all customers. These rates shall be increased on January 1 of each year by 3% for the base rate and by 8% for the rater per ERU.

The number of ERU's for properties shall be as established by the Stormwater Utility Formation report prepared by PacWest Engineering in March 2005, or as recalculated following a formal appeal process. The number of ERU's shall be rounded to the nearest whole number of ERU's.

Section 4 Billings and Collection

Request for water or sewer service will automatically initiate appropriate billing for storm drainage services. If development of a parcel does not require initiating water or sewer service, the creation of an impervious surface from which storm water may be discharged into public drainage facilities shall initiate the obligation to pay the fees and charges established by the Stormwater Utility.

The Stormwater Utility fee shall be billed and collected with the monthly city utility bill. The bill shall become due and payable at the same time as other city utility fees. Payments shall be allocated first to the stormwater utility balance due, next to the sanitary sewer utility balance due, and finally to the water utility balance due, unless specifically designated in writing by the customer for application on water or sanitary sewer charges specifically.

Section 5 Recovery of Unpaid Fees

Any fee due which is not paid when due may be recovered in an action at law by the City. In addition to any other remedies or penalties provided by City ordinance, failure of any customer to pay fees promptly when due shall be collectable pursuant to collection efforts or other lawful remedies of the City. The City may subject the customer to discontinuance of any utility services provided by the City and the City Manager is empowered and directed to enforce this provision against such delinquent customers.

Section 6 Well & Septic Tank Users

Developed properties that are served by well and/or septic tanks shall still be required to participate in the stormwater utility. If these properties are not served by other city utilities, than billing for storm drainage service shall occur upon creation of an impervious surface from which storm water may be discharged into public drainage facilities.

If a well or septic tank user is delinquent on payments in an amount equal or greater than \$250 for their storm drainage utility balance, the City may pursue collection efforts and place a lien on the property.

Section 7 Appeal Policy

Upon application and submittal of a \$250 application fee, a customer may seek a reduction of the monthly charge for storm drainage service. Upon submission of appropriate evidence, the Community Development Director or their designee shall consider the application. The customer must show to the city's satisfaction the amount of permanent reduction to the amount of impervious surface for the property.

Charges will be adjusted (increased or decreased) for the property if the change to the measured impervious area results in a change to the calculated number of ERU's for the subject property. If the number of ERU's remains the same or increases, the \$250 application fee will be retained by the City as an administrative fee for reviewing the application. If the number of ERU's decreases, the \$250 application fee will be refunded to the customer as a \$250 credit to their utility account.

Any adjustment made shall continue until the property is further developed. Upon further development of the property another application may be made by the customer.

Section 8 Administration

The Community Development Director shall be responsible for the administration of the stormwater utility (except for the billing and collection of funds), to include the development

and/or modification of administrative procedures, maintenance programs, capital improvements, operations and maintenance standards, and related activities.

The Finance Director shall be responsible for the billing and collection of funds.
